

Fuel combustion and their influence on the air and the environment: bilateral cooperation of APOKS and Norsk Energi

Applicant: Kominová asociace – APOKS, z.s.

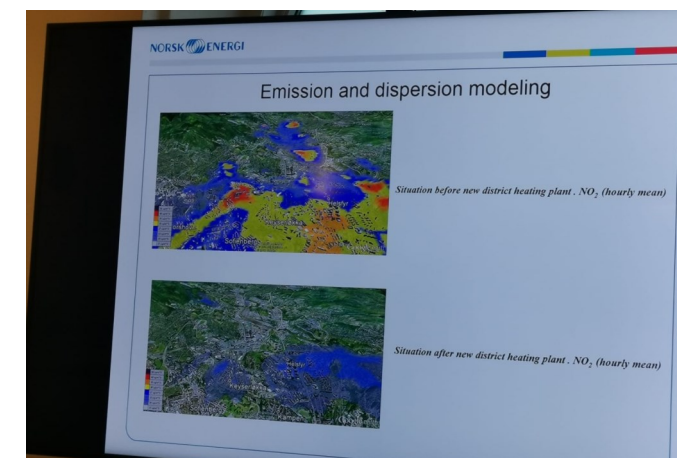

Partner organizations: Norsk Energi

Grant Amount EUR (CZK): 6 159,62 EUR (160 150 CZK)

The bilateral initiative focused on sharing experience and knowledge in the field of solid fuel combustion, its impact on air quality and raising public awareness of this issue. As part of the initiative several meetings were held in Oslo as part of a four-day meeting of APOKS and Norsk Energi representatives, which took place on 20-24 January 2020. The visit also included a tour of a solar-heated and pellet stove heated house. Representatives of the Norwegian Environment Agency, the main partner of the Environment, Ecosystems and Climate Change program, also participated in the initiative.

The new cooperation was successfully established. APOKS and Norsk Energi want to work together to raise awareness of the right heating, the right fuel types and the sharing of experience from previous projects. At the moment they are preparing a joint project that they would like to realize next year. Both parties evaluate the project and established cooperation as a very beneficial activity.

„The Norwegian grants and the “Trolltunga” call allowed us to establish bilateral relations with the Norwegian organization Norsk Energi. Only in a personal meeting can all aspects of the issue be discussed in detail. Norsk Energi's professionalism and brilliant attitude confirmed me in the right direction. Our four-day mission enabled us to discuss in detail the work and experience of both organizations, to learn the procedures for data evaluation and processing, to look at various applications that reduce the negative impact of human activity on air quality and, above all, strengthen our bilateral relations. We greatly appreciate the opportunities and support we have received and I believe that we will be able to establish long-term cooperation between the two organizations, which will be beneficial for improving air quality in our country as well as in Norway.“ (Walter Sodomka, director of APOKS)
